**Assessment details.**

## Final Written Report

V22092026

**Learning Outcomes**

This assignment targets all unit learning outcomes.

**Assignment Specification**

**Introduction**

Team members must contribute to a single, cohesive, well-structured and professionally formatted final report submission. Ensure the submission reads as one coherent document and not as a copy-paste of separate, poorly related sections created by team members working in isolation. To achieve this, it is suggested that the team:

- Agrees early on overall formatting, writing and diagram style and content arrangement.
- Plans how to allocate sections to be written / diagrams to be drawn by each contributor.
- Elects a member as overall document proof editor / style wrangler before submission.

Careful distribution of effort between all team members, and effective team communication, will be required to coordinate this submission.

Prepare your report from initial draft through to final version using an online edit-logged Google document that all students in your team can access. Ensure that the edit log of this file can be made available to the teaching team to support your group member's claims of authorship.

Overall, consider the following points when writing your report.

- FIT3162 (Computer science project): In all relevant sections, provide an explanation of the computer science and software development aspects of your project (e.g., coding, version control, bug tracking, rationale for algorithm and data structure selection and design).
- FIT3164 (Data science project): In all relevant sections, provide relevant information about the data science aspects of your project, (e.g., data pre-processing, visualisation, data transformation, rationale and methods used for data analysis).

**Length of report**

- The maximum report word count is 3500 words.
- Word count *excludes* text in figures, data tables, cover sheet, references, appendices and sample code.
- **State your report's word count clearly on your submission cover page.**

**FIT3164 Data Science Project Part 2**
**FIT3189 Cyber Security Project Part 2**

## Final Project Report Structure

Generic content in your assignment submission that can be applied to another project will likely score low marks. The content must show an explicit connection to **your** project and **your** experience.

### 1) Front matter

a) Title sheet, table of contents

b) Team member names

c) Authorship Statement: (i) Against each project team member's initials, briefly, but explicitly, list the sections *of the report* for which they provided leadership by drafting the initial version AND editing and finalising the contributions of other team members to ensure the section is ready for assessment. (ii) List all figures / diagrams / tables or other significant elements of the report produced or led by a team member where it is possible to assign leadership.
It is assumed that all team members contribute equally to the process of commenting and tweaking report contents; this does *not* need to be noted. But the named leader for each major component should be clearly stated in the way described by (i) and (ii) above. E.g. "Alan wrote the initial drafts and finalised the text for sections 1, 3, 5. He prepared all materials for figures 1.0 – 1.6 and he prepared figures 3.1 - 3.5 using annotated screen-shots from the working software."

d) Total project report word count.

e) Other key elements may be added here at the discretion of a project team.

### 2) Introduction

a. Introduce the project and its aims.

b. Introduce the report and its contents.

### 3) Project background summary

a. In a single paragraph, summarise the context and background information provided in FIT3161/63/3188 to allow the reader to understand the project rationale.
b. In a single paragraph, summarise the literature review provided in FIT3161/63/3188 to outline the main points of related work and relevant literature.

### 4) Outcomes

Critically discuss your project outcomes:

a. Present the results, achievements and the delivered product. Cross-reference the discussion of main achievements to screenshots of your end product included in an Appendix.
b. Explain how the final delivered project meets the requirements detailed in the Requirement Traceability Matrix (RTM) updated prior to your software demonstration, included in an Appendix.

c. Clearly indicate which requirements were met/un-met by indicating the status of each in the RTM.
d. Outline and discuss the limitations of your final project deliverable and suggest potential improvements and other future work.

**5) Methodology**

This section briefly describes how you developed your project (*not* your project management approach).

a. Describe and explain the rationale for the final project design using diagrams to assist.
b. How was the design implemented? What software and tools were used? And how were these tools used in developing your software product?
c. Sample Source Code provision: 50-100 lines (total) of source code in an Appendix that is representative of your source code overall. Include within this code evidence of:
   * full inline documentation
   * at least one function and its call
   * code lines addressing the satisfaction of 1+ specific software requirements

   The code sample need not consist of consecutive lines of code.
   The code sample does not count towards the report word limit.

**6) Software and Project Critique**

a. Critically discuss how well your project was executed overall.
b. Compare the realised project outcome to the initial project proposal (FIT3161/63/3188). Discuss how your thinking changed during project execution.
c. Note that you do not have to follow the initial proposal closely to earn good marks, but you need to explain how and why you deviated from the initial project proposal if this is the case. Or, if you did not deviate, why do you think you were successful in remaining on your initial path?
d. If you believe that your project was successful overall, discuss why and note specific things that were well executed and managed.
e. If you believe that some aspects of your project were unsuccessful, thoroughly discuss why. What could you or the team have done differently? For example, were there serious limitations in the software tools you used? Was poor project management or communication to blame?

**7) Conclusion**

a. Provide a 1-2 paragraph summary of your report's key contents

**8) References**

a. Provide a complete list of references cited in the report. List *only* references cited in the report. Consider using reference management software, such as EndNote, BibTeX or Zotero to generate a correctly formatted reference list.

b. Provide full bibliographic details of references in APA or IEEE format.
c. Note: the Bibliography does *not* count towards the document word limit.

**9) Appendices**

a. Include the following documents (as noted above):

i) Requirements Traceability Matrix (RTM).
ii) End product screenshots.
iii) Sample source code.

Note: Appendices do *not* count towards the document word limit.

**Report Style and Presentation**

Excellent written and diagrammatic communication skills are expected. The document should be formatted and presented at a professional level. All text sections, figures and diagrams should be clearly structured, labelled and numbered.

**Marking**

All team members are expected to make equitable contributions to this team task. However, marks are adjusted if the contributions of individual team members differ significantly.

**IMPORTANT!**
Failure to include the Authorship Statement in the front cover material will incur an automatic 50% penalty on the final mark for the assessment.

ALL team members must click the Moodle SUBMIT button. By clicking this, each team member approves the submission for grading, and agrees that the provided Authorship Statement is a true and accurate representation of the contributions of the team members.

**Marking Guide**

This assignment will be marked over 100 points and contribute 10% to the final unit mark:

| | **Report section** | **Maximum mark** |
|---|---|---|
| 1. | Front cover sheet | 0 - required |
| 2. | Introduction | 10 |
| 3. | Project background summary | 10 |
| 4. | Outcomes | 30 |
| 5. | Methodology | 15 |
| 6. | Software and project critique | 15 |
| 7. | Conclusion | 5 |

| | | |
|---|---|---|
| 8. | Sample code | 5 |
| 9. | References | 5 |
| 10. | Style and presentation | 5 |
| | **Total** | **100** |

(*) Discussion points may also be included in other sections if they relate directly to the particular section. Please note, keep your discussions focused on your own project and not generic to any project.

Content included in an Appendix will be assessed as part of the section to which it relates. Appendix content must relate directly to content in the main document body.

A detailed marking rubric is also available as a separate document on the submision link.

**Additional Notes and Suggestions**

1) Spend time carefully planning the write-up.

2) Consider carefully what material needs to be included.

3) Prioritise what is more important to include and add detail later if needed.

4) Each project and each team's execution of the project will generate different outcomes and experiences. Therefore, each team report will be specific to the project. Markers will NOT be looking for a specific “solution” to the problem you tackled. Instead, they will look for how well you understand and explain what you have been doing and how you relate your project execution to applying appropriate project management principles, computing principles and technologies in delivering a solution.

5) Discussion of decisions and results is important.

6) In planning your outcome sections, remember that you are trying to “satisfy a set of requirements” with your software.

7) Content in structured point form is acceptable instead of a long narrative, but the use of clear language is important as well.

8) Within the Project Background section and literature review, ensure the content supports what you have *completed or achieved*. By contrast, the FIT3161/63/3188 literature review’s purpose was to address work that, at that time, was incomplete or uncommenced.

9) Share the task of writing the report fairly based on the marks allocated and/or words written per section. Ideally, each member contributes equally.

10) You should allocate additional effort for other material: cover page, appendices, references etc, and reviewing, proofreading and final formatting.

**Late Submission**

1. Submission must be made by the due date. Late submission penalties will be deducted according to Monash University policy. (See Moodle, "Additional information and resources" section).
2. If you believe that your assignment will be delayed because of circumstances beyond your control such as illness, apply for an extension prior to the due date. Extensions and individual alterations to the assessment regime will only be considered using the University Special Consideration Policy (See Special Consideration website, and follow the procedure).

**Instructions for Written Group Submission if one or more group members are submitting late.**

**Group**

- The group provides the document as requested by the original deadline.
- Work that was intended to be contributed (e.g. text or diagrams) by a student with special consideration is omitted.
- A placeholder must be inserted in the report in coloured text of the form, <TEXT/FIGURE SUBJECT TO SPECIAL CONSIDERATION - STUDENT NAME> at the location of missing contributions. Each student submitting late should be allocated a specific and distinct colour. E.g. orange, green, blue that is easy to read.
- A list of all late submitting students, their text label colour, and the page numbers of all inserted placeholders in the document for each student must be included at the start of the report.

**Student with special consideration**

- The student with special consideration must re-submit the entire written text (including the components submitted on time by the rest of their group) by their personal extended deadline.
- The student with special consideration must replace all previous placeholders, the work that they have contributed in their uniquely coloured (text).
- For newly included figures, outline them in orange.
- A list of all inserted text/diagrams and their page numbers in the document must be included at the start of the report.
- The Authorship Statement section should be updated to include the contribution of the student with special consideration.

**Use of Generative AI tools in Projects and Assignments**

*See this assessment's Moodle module for the policy regarding use of GenAI in this unit.*
